

ABSTRACT

The present invention provides a packaging apparatus (1) capable of adjusting the thickness of a package with a simple configuration. The packaging apparatus (1) is a
5 packaging apparatus that manufactures a package (B) wherein articles to be packaged, such as foodstuffs, and gas are sealed in a bag, and comprises a cooling unit (6). The cooling unit (6) cools the gas sent to a tubular film (F) formed in a bag shape. The packaging apparatus (1) manufactures the package (B) wherein the gas, having a temperature lower than the outside air, and the articles to be packaged are sealed.
